Automating Data Important And Relationship Mapping Using Import Sets & Dot Walking

Problem Statement :

Organizations frequently import large volumes of data from external sources, but managing relationships between multiple tables during this process is challenging. Manual handling often leads to data duplication, inconsistency, and broken links between related records. Ensuring accurate mapping of fields and maintaining relational integrity requires significant effort and is prone to errors. There is a need for an automated approach to streamline data imports while preserving relationships across tables. Using Import Sets and Dot Walking can help simplify data mapping and improve accuracy. Hence, an efficient solution is required to automate data import and ensure consistent relationship mapping.

Objective :

The main objective of this project is to automate the process of importing data into the system using Import Sets while ensuring accurate relationship mapping between multiple tables. It aims to reduce manual effort, minimize data inconsistencies, and prevent duplication of records. By utilizing Dot Walking, the project focuses on efficiently linking related data fields across tables. The solution also ensures improved data integrity, faster processing, and scalability when handling large datasets. Overall, the goal is to create a reliable and streamlined data import mechanism that maintains proper relationships and enhances system efficiency.

SMARTBRIDGE
Let's Bridge the Gap

Task Initiation :

Milestone 1 :Import data from data source

Activity 1 : Create records in the Sheet

1. Open google sheet
2. Name the fields as name,email,department, manager and phone number
3. Enter some records
4. Save the sheet as: employee data
5. Download the file as .xlsx , .csv (or) .xml file

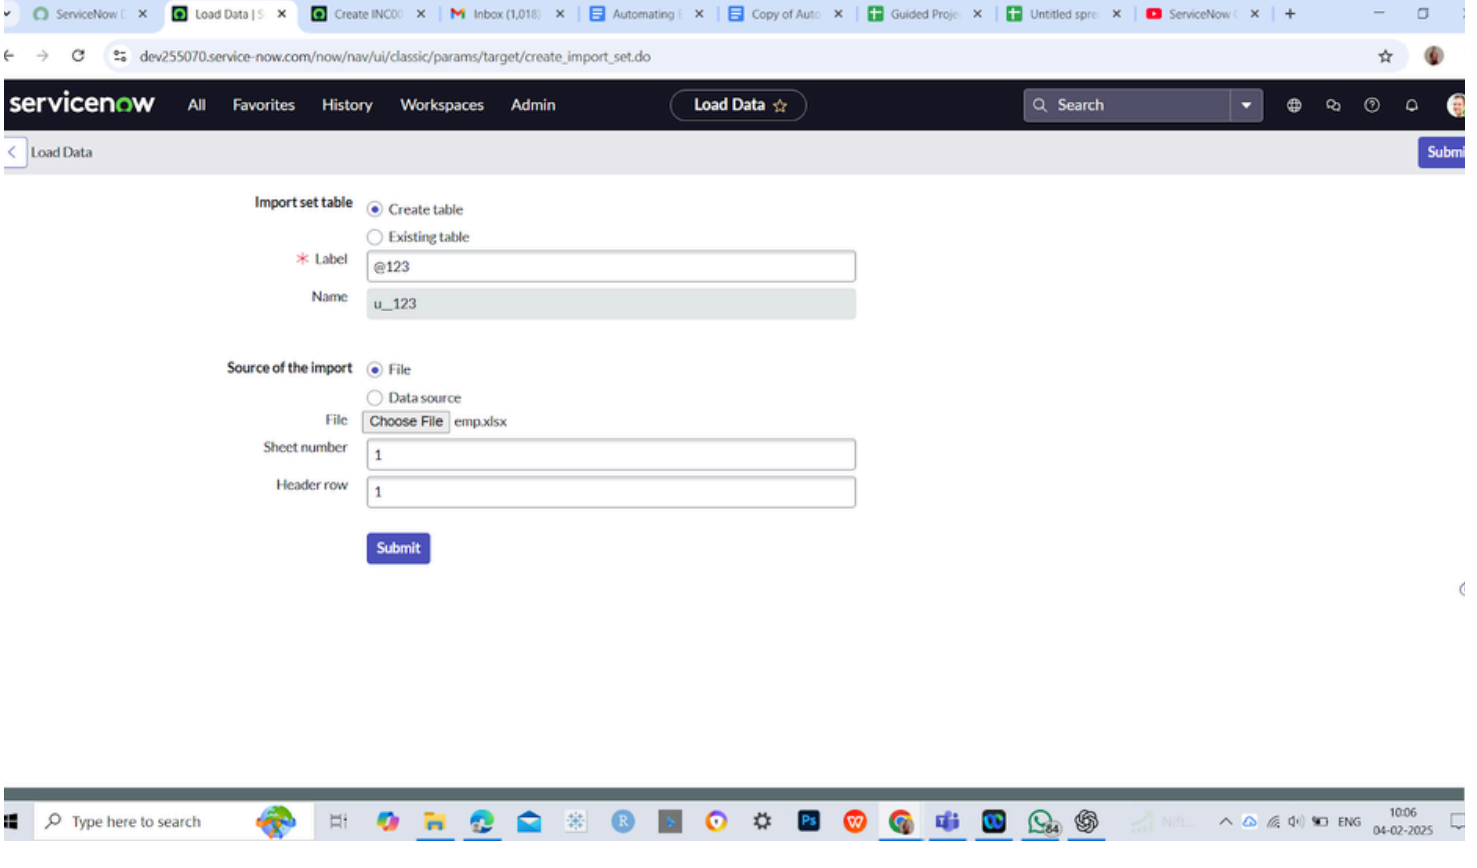
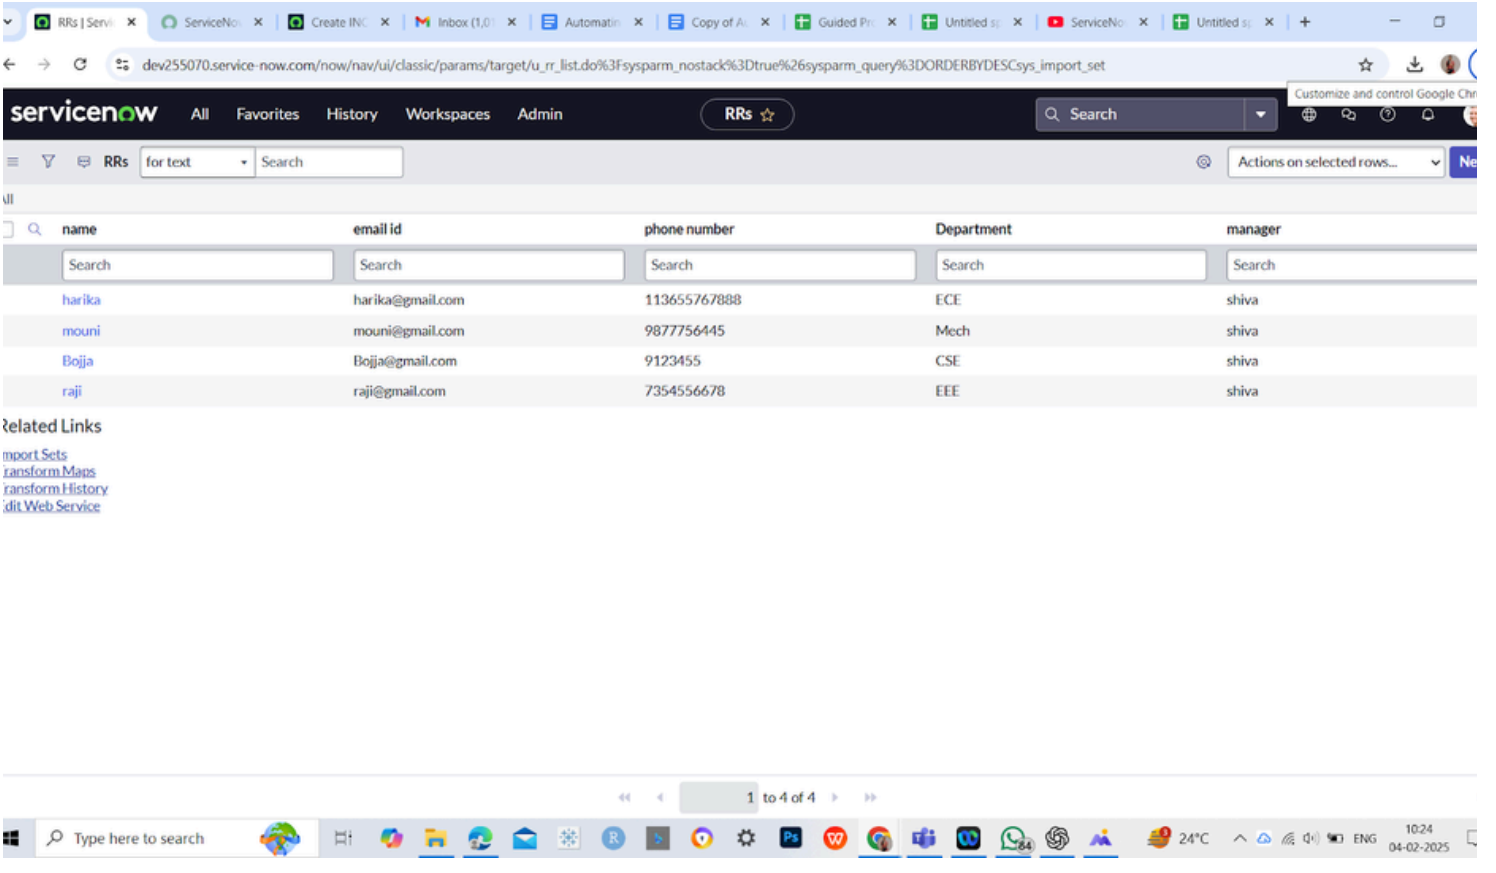
SMARTBRIDGE
Let's Bridge the Gap

Milestone 2 : Import data

Activity 1 : Creating Import Table(Staging Table)

1. Open service now.
2. Click on All >> search for import sets
3. Select load data under system import sets
4. select create table
5. Give the the import set table name as: import employee
6. Choose the file which we created in the XL sheet
7. The data is imported,click on personalized list
8. Add fields to the form





Activity 2 : Create transform map

1. Open service now.
2. Click on All >> search for import set
3. Select create transform map under import sets
4. Click on new
5. Fill the following details to create a new transform map
6. Give name as: Test
7. Select source table: @123
8. Select target table: user[sys_user]
9. Save the form.

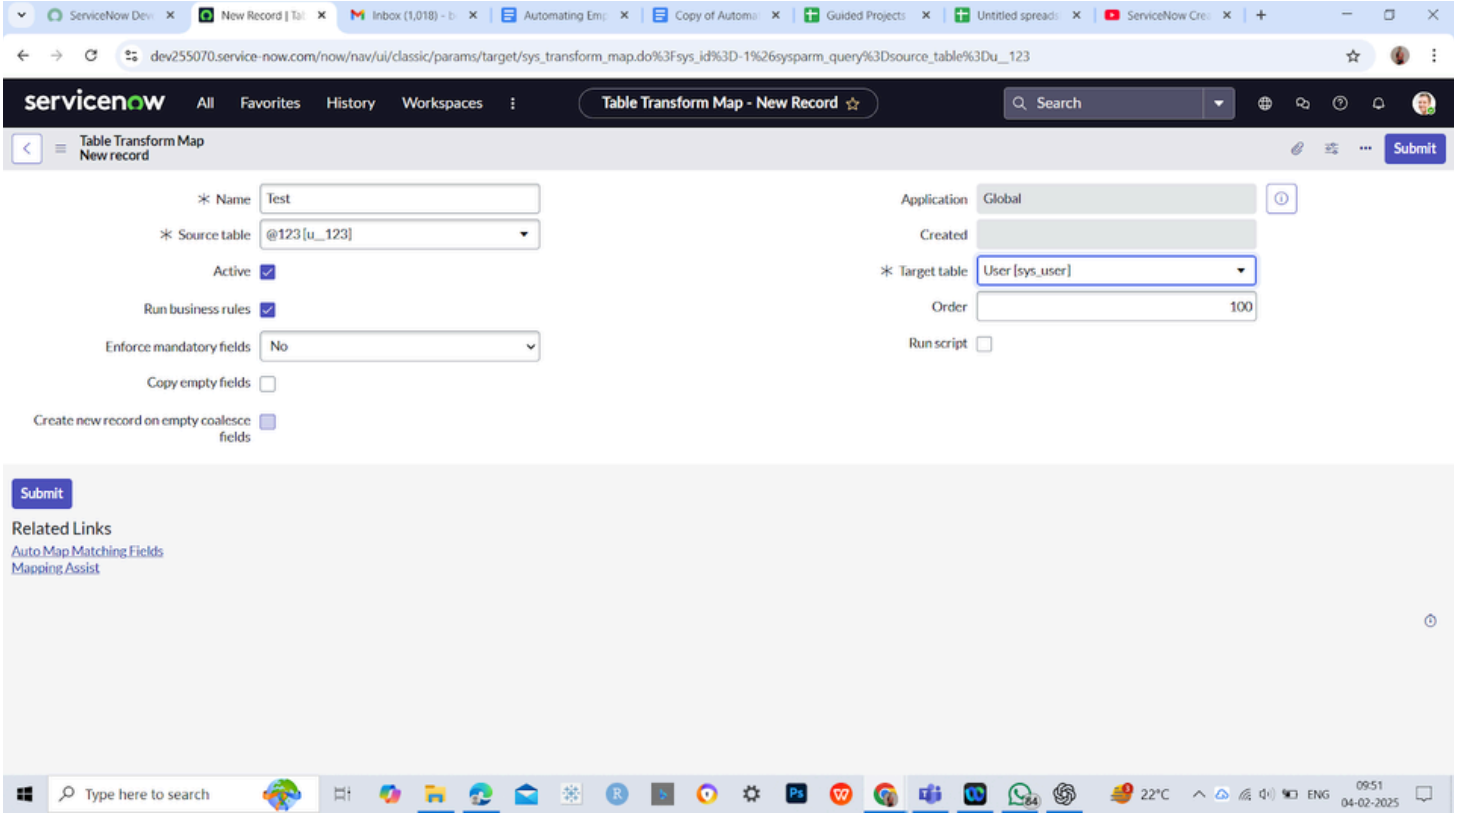
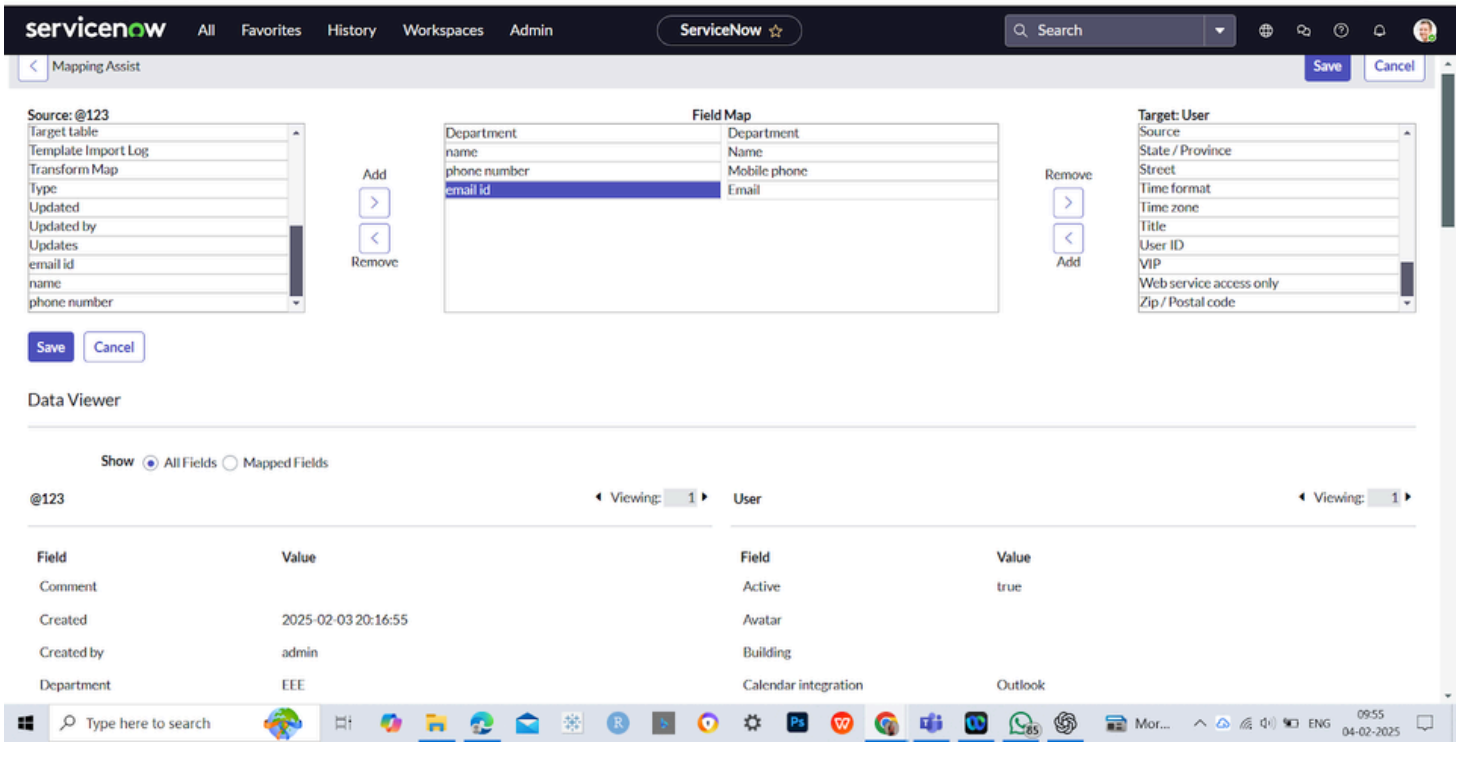
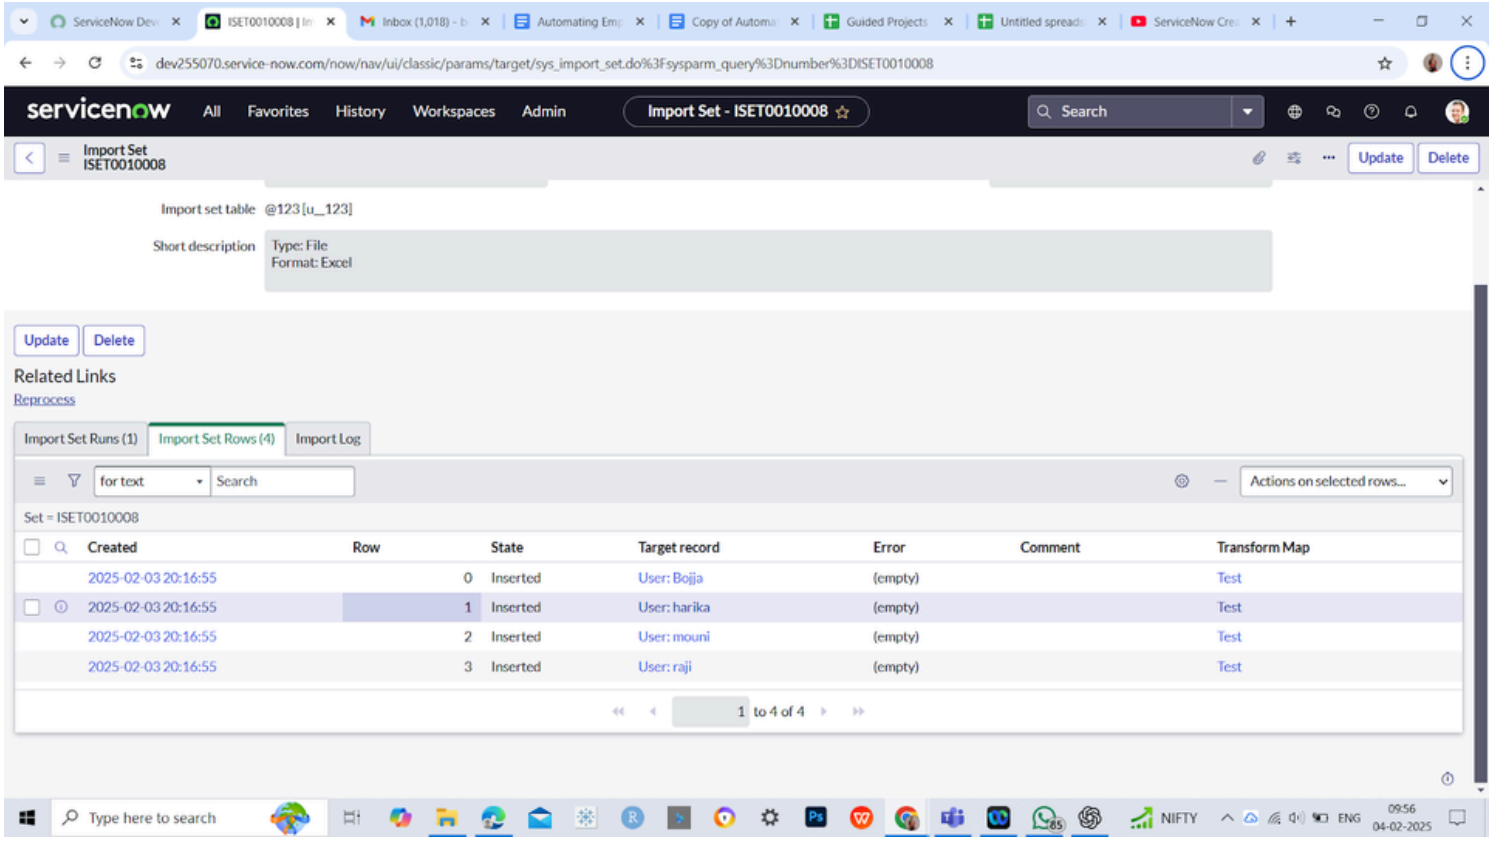
SMARTBRIDGE
Let's Bridge the Gap



Activity 3 : Match the fields using mapping assist

1. Scrolled down the created transform map form
2. Click on auto matching fields
3. Then in the mapping fields some fields are matched





4.Using mapping assist map the manager field.
5.Select the fields which you are mapping in the staging table and target table
6.Select manager in source table and add
7.Select manager field in target table
8.Click on the save button.

Activity 4 : Transform the Data

1. Click on transform in the related links.
2. Click on transform.
3. Data's transform state is completed.
4. Click on ISET0010008 under next steps
5. Four rows are inserted.

Milestone 3 : Dot walking

Activity 1 : Display department to the assigned to user

1. Open service now.
2. Click on All >> incident
3. Select create new under incidents
4. There is no field like department in the form
5. Email and manager fields are not visible
6. By using dot walking retrieve the data without opening the record
7. Click on context menu go to configure and select form layout

8.Select assigned to.department as mentioned below
9.Click on save
10.Add another field assignment.email.
11.Also add assignment.manager field
12.Click on save.
13.Open an incident form
14. Fill the mandatory fields and assigned to just imported user
15. Then department and email field is automatically filled

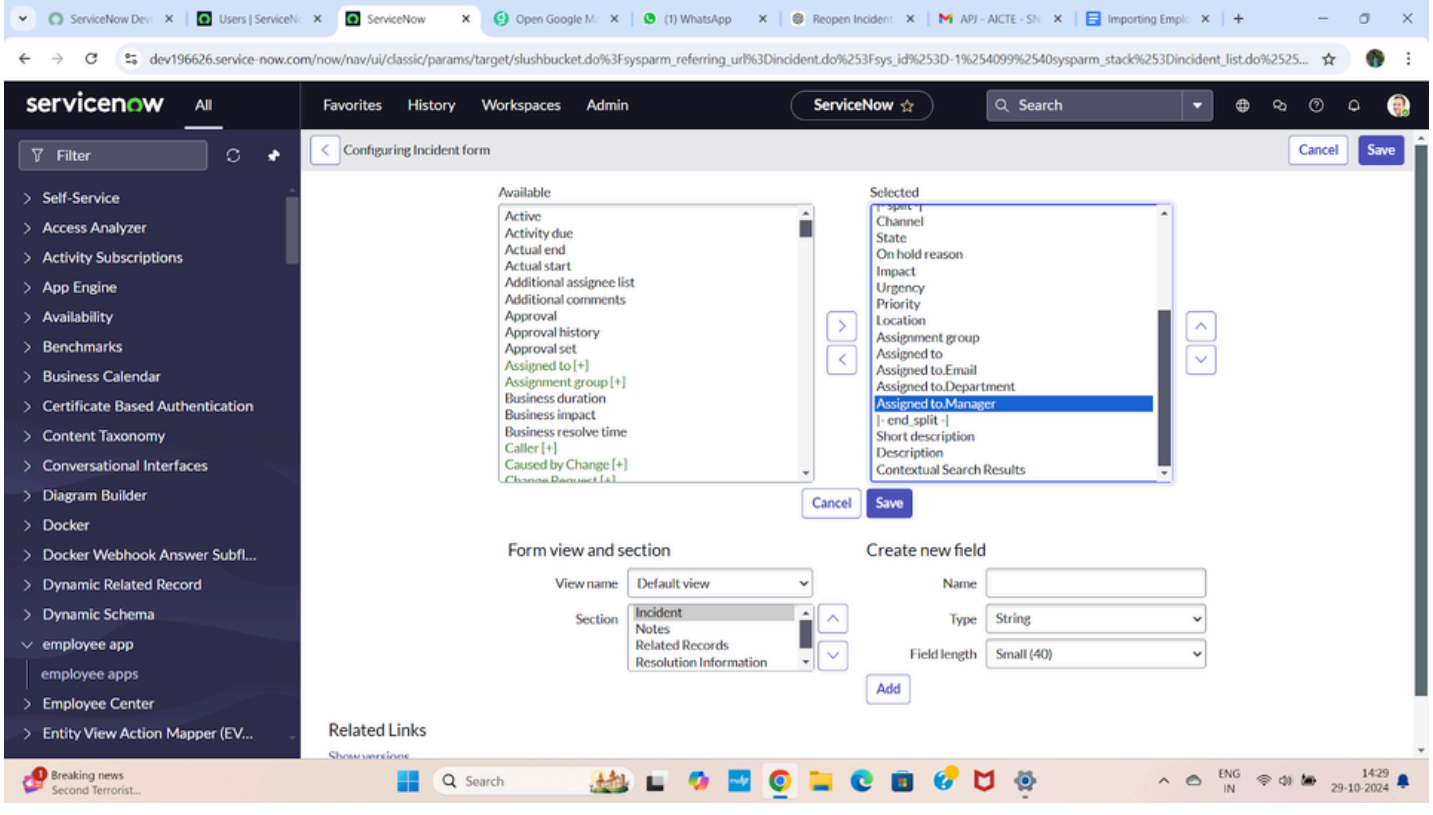
Let's Bridge the Gap



Milestone 4 : Testing
Activity 1 : Result

1. Open the New incident form.
2. Insert the assigned to field, then automatically it will update the email, department and manager.

Milestone 5 : Conclusion
Activity 1 : Conclusion

This project demonstrates how to efficiently import external employee data into ServiceNow using Import Sets and Transform Maps while maintaining proper data relationships. By mapping reference fields such as department and manager correctly, structured and reliable records are created in the system.
Using dot walking on the Incident form further enhances usability by automatically displaying related information like department, email, and manager without manually opening the user record. Overall, the solution improves data accuracy, reduces manual effort, and ensures seamless relationship mapping across tables.
